Health IT Networking Day
Saturday January 31

This event allows students to interact with industry professionals to explore career options. Groups of 6-10 students will rotate through your area for 20-30 minutes, allowing for information exchange, discussion and questions. We will also have a short networking break with a light lunch.

Practicum
Monday February 16 —Friday February 27

The ten day practicum experience is the high point of the program for our Health IT students! Their education comes to life in a real world setting as they spend two weeks with one of our employer partners. We can work with you to develop a customized practicum that will benefit your organization while enriching the education of our students.

Research Poster Forum
Thursday March 5

Student pairs present their Health IT research posters. Feedback from professionals like you is a crucial part of their learning experience! We hope you can be here to interact informally with students and evaluate their work.

On-Campus Interviews
Thursday March 5—Friday March 6

We welcome your participation to recruit new graduates of our program. We will help you use our HIT Works software to post jobs, preview student resumes, and select candidates to interview.
